

Alternatives Evaluation

In the months ahead, a broad range of alternatives focusing on a reduced water supply and incorporation of a nonstructural water element will be examined. An initial evaluation will be conducted to determine if there is sufficient information available about each alternative.

Once this initial step is completed, additional information for each alternative will be gathered to allow an objective comparison. A description of each alternative and the evaluation process will be described in the next issue of this newsletter.

Upcoming in Next Newsletter

- Summary of alternatives
- Update on alternatives evaluation process
- Status of data collection
